ALViS Smart Installation

ALViSmart runs on devices with Android OS. The minimum required version of Android is 2.2 (Froyo). ALViSmart requires network connection to communicate with ALViS web service.

In case of any error (e.g. communication lost with web service) error will be indicated by bell error icon and text describing the cause of the error.

When new events occur notifications are generated for each event in notification area. Each notification is represented by bell icon with exclamation mark and text describing the event.
